Lead Automation Detail

AI Lead Response & Follow-Up System

Product overview

AI Lead Response & Follow-Up System: every website enquiry gets an instant reply, a quality score and a follow-up, and you only step in where a human is needed.

Most small businesses lose leads the same way: the form is filled, nobody answers for hours, the follow-up is forgotten, and the lead buys from whoever replied first. This system closes that gap. The moment someone submits your website form, it saves the lead, checks it for spam, scores it HOT, WARM or COLD, thanks the lead by email, and alerts you with the full details. If the lead writes back with a question, an AI assistant answers it from your own FAQ and website content. If it cannot answer with confidence, it passes the message to you and tells the lead a human will reply.

Who it is for and the problems it solves

It fits any business that wins leads through a website form and where the owner or a small team answers personally: agencies, consultants, clinics, real-estate agents, coaches, training centers, home-service and B2B service companies. A good range is about 5 to 200 enquiries a month. Below that you can manage by hand; far above it you need a full CRM and a team.

The problem today	What it costs you	What this system does
Nobody replies for hours	The lead contacts a competitor who answered first	A confirmation reaches the lead within about a minute, day or night
You do not know which leads matter	Time goes to low-value enquiries while hot ones wait	Every lead is scored HOT, WARM or COLD from budget, interest, message and timeline
Follow-ups are forgotten	Warm leads go quiet and are never won back	Two automatic follow-ups (day 1 and day 3) for HOT and WARM leads
The same question arrives every day	You retype the same answers about services, timeline and location	An AI assistant answers from your FAQ and website content
Spam and bots fill the form	Your inbox and your time are wasted	Spam words, link floods and hidden-field bots are filtered out and logged
Leads live in emails and chats	Nothing to search, count or review	Every lead and every conversation is saved in one database
You call a lead and forget to tell the system	They still get an automated follow-up	A status change (or your own email to them) stops all further follow-ups

What you get

Every lead is answered, sorted and followed up without anyone lifting a finger, and the owner keeps full control. Each feature below shows the benefit to you.

1. Instant reply and instant alert

- The enquiry is saved to your database with a unique lead ID, date, contact details and message.
- The lead receives a friendly confirmation email within about a minute, so they know you received it.
- You receive an alert with the name, contact, budget, message and score, so you know who to call first.

> **Benefit:** you look responsive 24 hours a day, even when you are asleep, in a meeting or on holiday.

2. Smart lead scoring (HOT, WARM, COLD)

- Each lead gets a score out of 100 from service interest, budget, message quality, company name and timeline.
- The weights and the HOT/WARM thresholds sit in a scoring config you can change yourself, no coding.

> **Benefit:** you spend your time on the people most likely to buy.

3. Spam, bots and duplicates filtered

- Invalid emails, spam phrases, link floods and bot-filled hidden fields are rejected and logged separately.
- The same person submitting twice does not create two leads: a repeat with new details updates the original; an identical repeat is logged as a duplicate.
- A person who submits more than 5 times in 24 hours triggers one review alert instead of a flood of emails.

> **Benefit:** a clean lead list you can trust, and no wasted follow-ups.

4. Automatic follow-ups that stop at the right moment

- HOT and WARM leads get a follow-up after 24 hours and a last one after 72 hours. COLD leads are not chased.
- Follow-ups stop by themselves when the lead replies, when you email them yourself from the connected inbox, when you mark them in talk, converted, lost or do not contact, or when they write STOP.

> **Benefit:** you win back quiet leads without ever annoying a lead you are already talking to.

5. AI assistant that answers your leads' replies

- When a lead replies with a question, the assistant answers from your own FAQ and website content, in a short, polite reply.
- It answers only what it can find in your content. It does not invent prices, dates or promises.
- If it is not confident, if the message is a complaint, or if the lead asks for a demo, it hands over to you. The lead gets a note that a human will reply, and you get an alert with the full message.
- A reply of STOP or unsubscribe is respected at once: no more automated emails, and you are told.

> **Benefit:** common questions are answered in minutes, and the hard or sensitive ones always reach a person.

6. Simple control for the owner

- You change a lead's status (in talk, converted, lost, do not contact) to tell the system what you have handled by phone or WhatsApp.
- Every lead, every question, every answer and every error lives in one database, so you see the whole pipeline at a glance.

> **Benefit:** you see the whole pipeline at a glance and you stay in charge.

7. Safe for your inbox

- It only acts on emails from people who submitted your form. Your other emails are never labeled, marked as read, moved or deleted.
- Automatic replies, out-of-office notes and bounces are ignored, so there are no email loops.
- Each lead message is processed on its own, so one lead's message is never mixed with another's.

> **Benefit:** your normal daily email stays exactly as it is.

How it works

From the lead's side it feels like a fast, attentive business; from your side it is five automatic steps.

1. **1. A visitor fills in your website form.** Nothing changes on your site except the form now sends its data to the system.
2. **2. The lead is checked and saved.** Spam is filtered out, duplicates are merged, the lead is scored HOT, WARM or COLD and written to your database.
3. **3. Both sides are notified within about a minute.** The lead gets a thank-you email. You get an alert with the contact details, budget, message and score.
4. **4. If the lead replies, the assistant answers.** Questions that your FAQ or website can answer are answered at once. Anything unclear, sensitive or a request for a demo is passed to you, and the lead is told a human will reply within 1 business day.

5. **5. If the lead is silent, the system follows up.** HOT and WARM leads get a gentle follow-up after 24 hours and a last one after 72 hours. It stops immediately when the lead replies, when you email them, or when you mark their status.

Your part: read the alerts, reply to the leads that need a person, and change a lead's status after a phone or WhatsApp conversation.

Built to be safe: what it will never do

The system is designed so that a mistake never reaches your leads or your inbox.

- **It never invents answers.** It replies only from your FAQ and website content. No matching information, or low confidence, means the message goes to you.
- **It never argues with an upset lead.** Complaints, refund requests and legal wording are always passed to a human and are never answered automatically.
- **It never keeps emailing someone who said stop.** A STOP or unsubscribe reply is applied immediately and you are told.
- **It never touches your other email.** It ignores everything except replies from people on your lead list, and it never marks, labels, moves or deletes anything.
- **It never talks to robots.** Out-of-office replies, bounces and no-reply addresses are ignored, so there are no email loops.
- **It never mixes two leads.** Each message is processed alone, and the reply goes only to the person who wrote it.
- **It never follows up twice on the same person.** One lead, one follow-up stream, with a hard maximum of two follow-ups.
- **It never hides what it did.** Every lead, question, answer, duplicate, rejected form and failed email is logged in your own database. The data stays in your accounts, and automated answers carry a short note that a human can step in.

Packages

Three packages, each a one-time setup fee plus an optional monthly care plan. We share pricing on a call, once we know your requirements — book a demo call and we will confirm the exact price for your scope.

	Starter: Capture	Growth: Capture + Follow-up	Pro: Full Autopilot
Pricing		**Book a Demo Call for pricing**	
Website form connected to database	Yes	Yes	Yes
Spam, bot and duplicate filtering	Yes	Yes	Yes
Lead scoring HOT / WARM / COLD (editable)	Yes	Yes	Yes
Instant confirmation email to the lead	Yes	Yes	Yes

Instant lead alert to the owner	Yes	Yes	Yes
2 automatic follow-ups (day 1 and day 3)	No	Yes	Yes
Status control: in talk, converted, lost, do not contact	No	Yes	Yes
Follow-ups stop when the lead replies or you email them	No	Yes	Yes
Lead email replies detected and passed to you, with an alert	No	Yes	Yes
STOP / unsubscribe handled automatically	No	Yes	Yes
AI assistant answering lead questions from your FAQ	No	No	Yes
Knowledge setup (FAQ and website pages)	No	No	Up to 20 FAQ items and 10 pages

What the monthly care plan covers: we watch the system, fix problems, reconnect your email if the connection expires, and make up to 2 small content or text updates a month (FAQ, scoring weights, email wording). You can stop it at any time; the system keeps running as built, but nobody is watching it.

Not included: your own business email, domain and website hosting, and the small usage cost of the AI service. They are paid to those providers directly.

Optional add-ons (quoted separately)

Add-on	What it does	Pricing
Extra follow-up sequence	A third or fourth message, or a different sequence per service	Quoted on the call
Owner alerts on WhatsApp or Slack	A short message to your phone for every HOT lead	Quoted on the call
Extra knowledge pages	More FAQ items and website pages for the AI to learn from	Quoted on the call
Second language	Emails and AI answers in a second language	Quoted on the call
Owner dashboard	A web page to see and manage leads without the database view	Quoted on the call

Getting started is easy

Three steps and you are live. You spend about 20 minutes in total; we do the technical work.

1. **1. Book a free 20-minute kickoff call.** We confirm what you need and which package fits.

2. **2. Share access.** Your website form, your business email and your database. We guide you through each one, and you never send us your main passwords.
3. **3. Review and approve.** We test everything, you check the results and the email wording, then we launch and watch the first 7 days.

When you book, we send you the Client Setup Guide: a short document you can read online or download, with a simple checklist of what to prepare.

Good to know: limits and what is not included

This is an email-based lead system, not a full CRM or call center. Knowing the edges up front keeps expectations clear.

- **Email only.** It handles the website form and email replies. Phone calls and WhatsApp chats are not read; after such a conversation you set the lead's status so follow-ups stop.
- **"Instant" means about a minute.** The system checks for new emails every minute, so replies arrive within a few minutes at most.
- **Follow-ups go out once a day, at 9:00 in your time zone.**
- **Your owner emails count only from the connected mailbox.** If you reply to a lead from a different email app or address, the system cannot see it, so mark the lead's status as well.
- **The AI is only as good as your content.** It answers from your FAQ and website pages. The more complete they are, the more it can answer; the rest comes to you. It does not negotiate prices or make commitments.
- **Language.** Emails and AI answers are in English unless you add a second language.
- **Sending volume.** A new business email should start gently: we recommend staying under about 30 automatic emails a day for the first weeks, and your email provider's own sending limits apply.
- **Volume.** The system works well for hundreds of leads a month. If you grow far beyond that, the next step is an owner dashboard.
- **Connections can expire.** Google or your email provider may ask to sign in again from time to time; the care plan covers reconnecting.

Not included: designing your website form, advertising, SEO, phone answering, payments, and integration with a separate CRM (available as an add-on quote).

Frequently asked questions

Do I need to be technical? No. We do the building, connecting and testing. You share a few details and approve the result.

Will emails come from my business address? Yes. Leads see the address you choose, for example info@yourcompany.com.

Will it read or answer my other emails? No. It only handles replies from people who filled in your form. Everything else in your inbox stays untouched.

What if the AI does not know the answer? It does not guess. The lead is told a human will reply within 1 business day, and you receive an alert with their message.

What if a lead is angry or asks for a refund? Those messages always go to you and are never answered automatically.

I already spoke to a lead by phone. Will they still get a follow-up? Not if you change their status to in talk, converted, lost or do not contact. Follow-ups also stop on their own when the lead replies by email or when you email them from the connected mailbox.

Where is my lead data stored? In a database in your own account. You own the data and can export it at any time.

Can I change the scoring, the FAQ or the email wording? Yes. Scoring weights and the FAQ live in your database, where you can edit them. Email wording changes are covered by the monthly care plan.

Do I have to take the monthly care plan? No, it is optional. The system keeps running without it, but nobody monitors it or fixes connection problems.

Can I start small and upgrade later? Yes. You can move from Starter to Growth or Pro at any time and pay only the difference in the setup fee.

Will it work with my current website form? In most cases, yes. If your form can send its data to a web address (WordPress, Wix, Shopify and custom sites usually can), we can connect it. We confirm this on the kickoff call.

How long until it is live? Starter takes 3 to 5 working days, Growth about a week and Pro one to two weeks from when we receive your access.
