DevZink Lead Automation - Client Setup Guide

Nov 8, 2026 · @Safian

You spend about 20 minutes on this guide. We do the building, connecting and testing.

Welcome: what to expect

Setting this up is easy because we do all the technical work. Your part is to share a few details, give us access to three things, and check the test results.

You do not need to:

- write or understand any code
- install any software
- change any technical setting

You will:

- fill in the checklist in the next section (about 10 minutes)
- share access to your website form, your business email and a Google Sheet (about 10 minutes)
- look at the test results and approve the email wording

If you get stuck on any step, tell us. We can do it with you on a short call.

Your checklist: the five things we need

Tick each box as you send it to us. Write your answers in an email or on the kickoff call.

- [ ] **1. Your website and form.** Which platform is your website on (WordPress, Wix, Shopify, Squarespace, custom)? Which page has your contact form?
- [ ] **2. Your business email address.** The address you want customers to see, for example info@yourcompany.com. Who is the provider (Google Workspace, Microsoft 365, your web host)?
- [ ] **3. Your Google account.** The Google email you use. We will create the lead sheet there and share it with you.
- [ ] **4. Your preferences.**
  - Where should new-lead alerts go (one or two email addresses)?
  - What budget makes a lead "serious" for you?
  - What name should sign the emails (for example your name or your company)?

  - Your time zone and your business postal address (shown at the bottom of follow-up emails).

- [ ] **5. Your questions and answers (Pro package only).** 10 to 20 questions customers ask most, with the answer you want them to get. The next sections show how.

How to share access safely

You never send us your main passwords, and you can remove our access at any time. Choose the easiest option for each item.

Item	Easiest way	Other way
Website form	Tell us the platform and the page. We send one short instruction (a line to paste or a setting to switch on), and you or your web person applies it.	We join a short screen-share call and do it with you.
Business email	We connect it through your provider's own secure "Allow access" sign-in screen, where you enter the password yourself and we never see it.	If your provider uses connection settings instead, you create a separate app password in your email panel and send it through a password manager link that expires, never by chat or plain email.
Google Sheet	We create the sheet in your Google account and share it with you.	You create an empty sheet and share it with the email address we give you, as Editor.

Good habits

- Use a separate login or app password for us, not your main one.
- Never send a password in a chat message or a normal email.
- When the project ends, or whenever you like, remove our access from the same place where you gave it. The system then stops working only for that connection, and nothing else changes.

Pro package only: your questions and answers

The AI assistant can only answer what you tell it, so a good list of questions and answers is the most useful thing you can give us. Write down the questions customers ask you again and again. If you are unsure, send us your last 20 customer emails and we will draft the list for you to approve.

Here is an example to copy. Add as many rows as you like.

Question	Your answer
What services do you offer?	(Example) We design and build websites, run monthly maintenance and offer SEO.
How long does a project take?	(Example) Most projects take 2 to 4 weeks, depending on size.
Where do you work?	(Example) We work remotely with clients worldwide and visit clients in Austin only.
How is pricing decided?	(Example) We quote each project after a short call. Packages start at $X.
Do you offer support after launch?	(Example) Yes, 30 days of free support, then optional monthly plans.
What do you not do?	(Example) We do not build mobile games or manage paid ads.

Tips for good answers

- Keep each answer short and clear, two or three sentences.
- Say what you do not do, so the AI never promises it.
- Include prices only if you are happy for them to be sent automatically.
- Anything not on the list goes to you, with a note to the customer that a person will reply.

Timeline: from kickoff to launch

Most of the waiting time is us building and testing; the faster we receive your checklist and access, the sooner you go live.

1. **Kickoff call (20 minutes).** We confirm the five items in your checklist and answer your questions.
2. **You send the checklist and access.** Usually within 1 to 2 days.
3. **We build.** We set up the form connection, the lead sheet, the emails and, depending on your package, follow-ups and the AI assistant.
4. **We test.** We run test leads through the whole system, including a customer reply, a follow-up, a STOP request and a lead you contact yourself.
5. **You review.** You see the test results and the wording of every email, and tell us what to change. Usually 1 to 2 days.

6. **Launch and 7 days of close watching.** We switch everything on, watch the first week and fix anything that needs it.

Package	Typical delivery after we receive your access
Starter	3 to 5 working days
Growth	About 1 week
Pro	1 to 2 weeks (depends on how fast we receive your questions and answers)

After launch: your simple routine

Day to day, the system works on its own. You only step in when an email asks for a person.

1. **Read the alerts.** A new lead alert shows the name, contact, budget, message and score (HOT, WARM or COLD). Call or email the HOT ones first.
2. **Reply to the leads that need you.** If the AI assistant is not sure, or the customer is upset or asks for a demo, you get an alert and the customer is told a person will reply within 1 business day.
3. **Update the status after a call or chat.** Open your lead sheet, find the lead, and choose a status in the Status column. The system then stops sending follow-ups to that person.

Status	When to choose it	What the system does
in_talk	You are in a conversation with the lead	Stops all follow-ups
converted	The lead became a customer	Stops all follow-ups
lost	The lead said no	Stops all follow-ups
do_not_contact	The lead asked you not to contact them	Stops all emails

The status is read the next morning at 9:00, so change it as soon as you finish the call. Leads that reply or write STOP by email are updated automatically.

If you email a lead from your connected business mailbox, follow-ups stop on their own. If you use a different email app or address, please also set the status.

Support

Email us at info@devzink.com and we reply within 1 business day. Kickoff and review calls are scheduled at a time that suits your time zone.

- **During launch:** every package includes 7 days of close support after go-live.
- **After that:** the monthly care plan covers monitoring, fixes, reconnecting an expired email or Google connection, and up to 2 small content or wording updates a month.
- **Without a care plan:** the system keeps running as built, but nobody watches it, so a problem may go unnoticed.

To help us fix things quickly, include:

1. what you expected to happen
2. what happened instead
3. the lead's email address and roughly when it happened
4. a screenshot, if you have one

If the system seems to have stopped completely (no alerts for days while leads are coming in), write URGENT in the subject line.
